

Vinyl Decal Application Instructions

- Step 1** Thoroughly clean the surface that the decal will be applied to. Make sure all oils and waxes are removed.

Image 1

- Step 2** Without removing the decal's paper backing, position the decal where you want it. Use a couple of pieces of masking tape to tack in place while finding the exact placement. (Image 1)

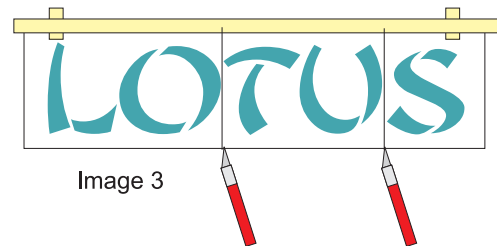

Image 3

- Step 3** Once the decal is in position, place a piece of masking tape across the entire top edge, creating a hinge (Image 2). You may want to cut between objects in your decal to create smaller decals (Image 3).

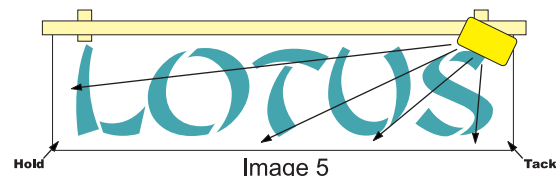

Image 5

- Step 4** Fold the decal back along the hinge and completely remove the paper backing (Image 4). Firmly grab the two bottom corners. Tack one corner to the surface while continuing to hold the other. Begin to squeegee (always press the squeegee firmly and work in one direction) (Image 5).

- Step 5** Slowly peel back the masking tape. It is best to pull the tape along the surface rather than away. Any bubbles that may have occurred can be popped with a safety pin.

- Step 6** You're Finished!
